

# Takedown display ASG Big

In certain situations, it is helpful if emergency services can use an oversized takedown or information display in order to get the attention of other road users. Typical examples are larger distances between special vehicles and following vehicles on motorways, extremely unfavourable weather conditions or informing vehicles on several lanes from the hard shoulder. For these applications, the ASG Big, mounted from inside onto the tailgate, can be used.

## PRODUCT FEATURES OF THE ASG BIG 7x1:

- combination of 7 modules to form a large display
- full matrix with a total of 77x17, i.e. 1309 high-power LEDs
- type height 195 mm
- type width 923 mm
- 12 V supply voltage
- control CiA447
- for installation in the interior of the vehicle
- universal mechanical connection options on the strut profile
- possibility of text display in red, yellow and red/yellow
